

Hand-held Vascular Dopplers

Hand-held Vascular Dopplers

SummitDoppler

Each Hand-held Doppler comes with a choice of 4, 5 or 8 MHz probes included in the price, with 8 MHz being the most popular for general vascular use.

In response to customer requests for a robust, high quality, reliable and sensibly priced hand-held Doppler system, Nuros has introduced LifeDop™.

The hand-held range offers a wide choice from simple non-display models, to those with display, rechargeable batteries and audio-recording. New chip technology has eliminated gel noise and together with superior sound design creates the highest quality and most sensitive Doppler. A built-in battery management system increases battery life by over 400% from the traditional Doppler. LifeDop™ is the first Doppler to offer the option of built-in audio recording allowing play-back to colleagues, downloading to email or permanent storage. Other more advanced models are available including an ABI system with waveform printout on adhesive paper and bi-directional probe - please call or email for information and prices. All products carry a full one-year warranty.

Cat. No	Vascular Dopplers—Descriptions	Price (£) ex. VAT inc. probe
L150	no-display	298.00
L150R	no-display, with re-charger	349.00
