Blood-Tight Polyester Tissue

The Endoluminal Stentgraft System
for Open Heart Surgery

The Endoluminal Stentgraft System for Open Heart Surgery

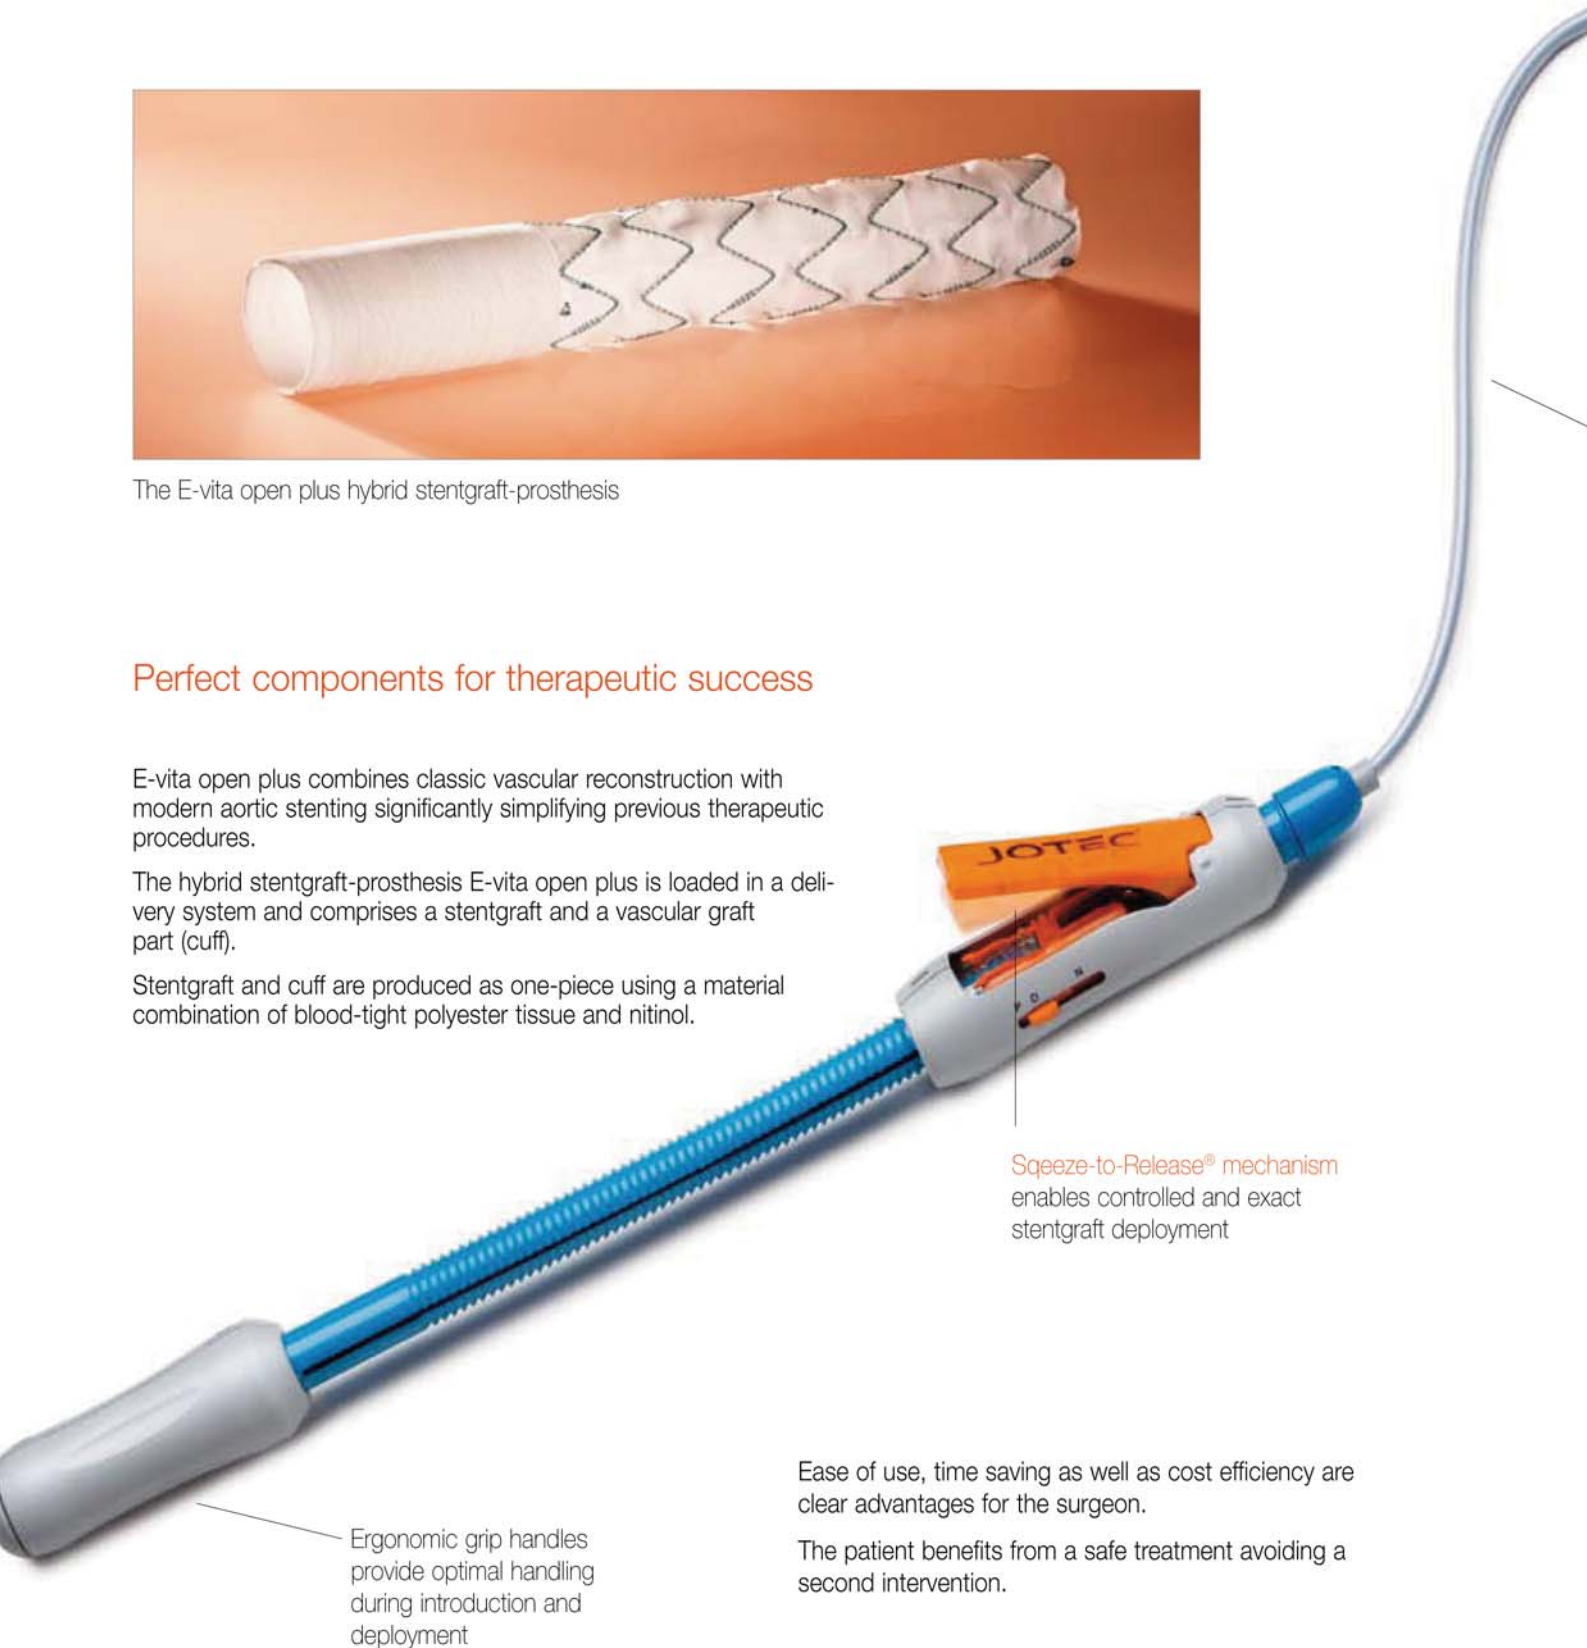

The E-vita open plus hybrid stentgraft-prosthesis

Perfect components for therapeutic success

E-vita open plus combines classic vascular reconstruction with modern aortic stenting significantly simplifying previous therapeutic procedures.

The hybrid stentgraft-prosthesis E-vita open plus is loaded in a delivery system and comprises a stentgraft and a vascular graft part (cuff).

Stentgraft and cuff are produced as one-piece using a material combination of blood-tight polyester tissue and nitinol.

Squeeze-to-Release[®] mechanism enables controlled and exact stentgraft deployment

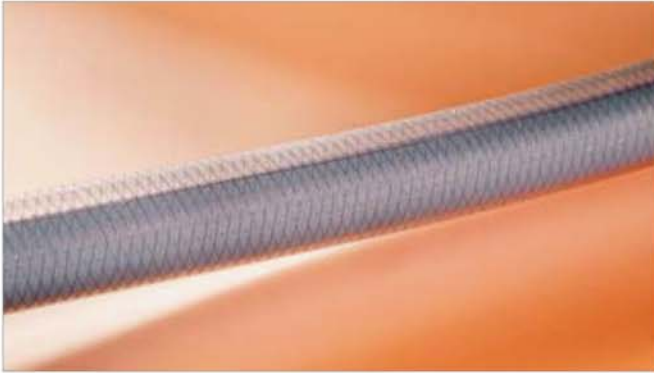

Ease of use, time saving as well as cost efficiency are clear advantages for the surgeon.

The patient benefits from a safe treatment avoiding a second intervention.

Ergonomic grip handles provide optimal handling during introduction and deployment

Atraumatic ballpoint tip avoiding injury of the vessel wall

Specially developed catheter material for optimum pushability and precise torquability

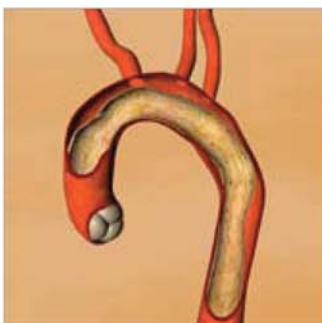

Optimized „elephant trunk“ procedure through combination of conventional and interventional techniques

The stentgraft of E-vita open plus is ideal when treating the surgically non-accessible descending part of the thoracic aorta. The woven prosthetic component allows a safe surgical fixation and serves as a connection (vascular adaptor) for the classic vascular reconstruction of the aortic arch.

The following indications can be treated in a one-step procedure with E-vita open plus:

- Acute aortic dissection Stanford type A
- Complex dissection of the aorta Stanford type B
- Long-range aortic aneurysms
- Chronic long-range dissection of the aorta

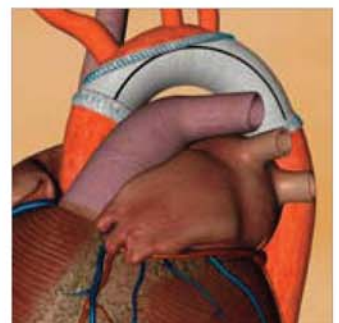

Aortic dissection

Deployment of the stentgraft part

Extraction of the vascular prosthesis (cuff)

Successful reconstruction of the aortic arch

The Endoluminal Stentgraft System for Open Heart Surgery

Ordering information

We deliver the E-vita open plus hybrid stentgraft in diameters of 24 - 40mm. Product training as well as on-site implantation support is part of our services.

Quick and reliable delivery of the standard products in Europe within 24 hours.

Call our central office: +49 (0)7471 / 922 - 0
